**Department of Information Technology
Seminar on Solana Campus Connect**

The Department of Information Technology has organized Seminar on Solana Campus Connect on 12th November 2022 in collaboration with Google Developer Student Clubs MSIT to give students insights into Web 3.0 and Solana. The speaker at the event was Mr. Aman Sanduja, Founder of Moving (in stealth), on a mission to democratize information and make it seamless for people to access Web3 applications, and an expert on topics like Blockchain, Web3, Defi, DAOs, and NFTs.

The event began with a discussion of currency, its development and value, as well as the role that Web3 and blockchain play in making its transactions faster, more secure, and decentralized. Followed by insight into Web3, Blockchain, how these technologies are implemented and used in the present day, and their relevance in the modernizing financial sector. Further on, the working and implementation of NFTs on Blockchain were discussed in the event. And later, at the event, Cryptocurrency was brought up and discussed. With this interactive event, students got a deep exposure to the functioning of blockchain, the implication of Bitcoin, Ethereum, and Solana, and the modern technologies associated with them.

The seminar concluded with great enthusiasm and a lot of learning in the field of Blockchain.
